A waterproof camera for kids means to be instant clicking and shooting underwater. To enable developed underwater vision, this camera in tunes with waterproof certification, rated at 33 feet.

It's not rocket science to run the camera. With icons and large buttons, it becomes user-friendly to the kid.

In your little kid's hand, it's sometimes pretty tough to hold onto a thing for a longer time.

So, whatever it is, it might drop on the floor. To protect from the drop, the Nikon features shockproof certification, measures 5.9 feet.

An interesting fact of this camera that it can go down to 14 degrees F to knock down the freezeproof. So, it's not a big deal to bring it underwater or direct sunlight (sometimes).

Pros:

- Affordable price
- Works well in underwater
- Pretty lightweight
- Portable to anywhere
- Included battery and memory card

Cons:

- The battery tends to drain fast

Buying Guide for Video Camera

If you are sure to buy a video camera for your little one, surely you will want to buy the best video camera out there. You need to keep in mind your child's age and some other factors while buying a camera.

Here we will discuss some facts that will allow you to make the best kid-friendly choice.

Age

The types of cameras vary in different ages. It is a fundamental matter to select an appropriate camera according to age. You need to look for a well-built camera capable of working on separate accidents and shocks when your child is between 3-6 years old. The child prefers childish gadgets with different cartoon character logos and designs. In the case of 8-10 years old children, they mainly focus on this type (discussed above) of design rather than functions. And a compact camera can be a better option.

Resistance

We all know that kids are not the sturdy kind at all when carrying something. Falling things out of their hands is sort of inevitable.

So, choose a camera with a muscular body or with extra protection for your kid. It will be better if you go for a PVC model with silicone reinforcement or additional protective coating.

There are also some waterproof models in the market for you to choose from.

Taking Care

While buying a camera, you must consider your kid's ability to take care of things. As kids are not the best kind of handlers of things, buy a camera with straps or handles so that it doesn't slip off while your kid is shooting.

Also, mind the weight. You should avoid anything above 400 grams. Because anything above 400 grams will make things a lot harder for your kid to handle, besides, choose a camera with comparatively bigger buttons. It will enable them to operate it a bit more easily.

Simplicity

Buy something with a simple mechanism so that your kid can operate the camera without facing any real difficulty. Look for something with the least buttons. Trigger, zoom, and deletion of photos, a dual purpose is more than enough. There should be an LCD screen, also.

Image Quality

Keep the quality of photos in mind. If the quality is not up to the mark, it may disappoint your kid.

So, try to choose something around 5-7 MP, not more than that. The idea is, when your kid will be able to take some good snap, he will be amazed, and you also don't want to deprive yourself of witnessing such a divine scene.

Features

There are lots of options out there. Companies are manufacturing cameras with tons of new and updated features.

With a few devices, your younger one can snap selfies, edit photos and videos with multiple filters and frames, and sometimes deform the face and make a cartoonish look with stickers.

Some other cameras have facial recognition, voice recording, automatic exposure function, image stabilizer to take steady pics, etc.

So, considering your kids' choice and, obviously, your budget, find the best kids video camera for your little one.

FAQs

1. Which brand to choose for buying a kid camera?

Answer: Among numerous brands, we can quote Fujifilm, VTech, Nikon, and so on. These are the best brand out there for a child camera.

- What is the least number of pixels for a kid's camera?

Answer: We suggest you not buy a camera that doesn't provide at least a 5MP sensor. The 5MP sensor is a modest one for kids.

- Are there any age barriers to buy a camera for a kid?

Answer: Well, at least 3 years is recommended to give a camera to your kid. When a kid moves from 8 to 10 years, more advanced devices hop in for a better photography experience.

- How long a kid video camera's battery should last?

Answer: If you think of the only video mode, it should last at least 2 hours of continuous video recording. In photos, hundreds of shots can be taken on a single charge.

Conclusion

Giving a suitable camera to your kid according to the age might become a new partner to him. Each camera is built with different aspects and a wide range of functions. Some are highly

advanced, and some are mid-ranger. The options are vast, including video recording to gaming as well. Your child won't be confiscated in shootings with these cameras only; they can play games while bored.

So, present your kid a video camera at Christmas, holiday, or any moment and let your kid discover the best video camera for 8 years old and unleash their creativity bluntly.
